The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 76 is rejected under 35 U.S.C. 103(a) as being unpatentable over Emery et al in view of Arko.

Emery et al teach an antigen in a time-delay matrix (column 4 lines 61-67).

Arko teaches a chamber for use as an infection site to studying in which fluids can be collected therefrom (column 1 lines 62-column 2 line 14. Apertures 5mm in diameter are specified (figure 2 and column 3 lines 12-16).

It would have been obvious to one of ordinary skill in the art of making monoclonal antibodies to collect fluid containing immune cells as a first step to make such antibodies using the container of Arko for the advantage of collecting the fluid contains such antibodies and adding the matrix of Emery et al for the beneficial effect of delayed release of antigens for interaction with said immune cells.

Claim 76 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 76 "molecules" has no antecedent basis. Do applicants intend "antigen"? Further, "molecule" is vague; what molecular weight?

No claims allowed.
